Acme Corp Hiring Team
Re: Platform Engineering Manager

Dear Hiring Team,

I'm applying for the Platform Engineering Manager role. I like running platforms that other engineers stop thinking about because they just work.

At Example Health I lead the platform team that runs Kubernetes, CI/CD and observability for 40 product teams. We moved every service off hand-built VMs onto Kubernetes on AWS over 18 months without a customer-facing outage, and we cut on-call pages from about 30 a week to about 8 by fixing the noisiest alerts first.

My team today is 10 people including two leads, which sits at the top of your range. I haven't managed managers yet, and I'd welcome growing into that.

Thank you for your time. I'd be glad to talk.

Sincerely,
Jordan Lee
