Jordan Lee

Rochester, NY · jordan.lee@example.com · +1-555-555-0100 · linkedin.com/in/jordanlee-example

Professional Summary

Engineering leader with 15 years across backend development, platform engineering and cloud operations. Started as a developer on payments systems, then built and led the platform team that every product at Example Health runs on. Known for making on-call boring: fewer pages, faster recovery, and runbooks people actually use.

Core Competencies

- Platform engineering and internal developer platforms
- Cloud operations on AWS: cost, security and reliability
- Incident response and on-call: PagerDuty, blameless postmortems
- Building and leading teams of engineers and team leads

Professional Experience

Example Health: Engineering Manager, Platform

Rochester, NY (hybrid) · Mar 2020 – Present

Led the platform team (8 engineers, 2 team leads) that runs the shared Kubernetes, CI/CD and observability stack for 40 product teams.

- Moved all services from hand-built VMs to Kubernetes on AWS over 18 months, with no customer-facing outages during migration.
- Cut pages per on-call week from about 30 to about 8 by fixing the noisiest alerts first and deleting alerts nobody acted on.
- Introduced blameless postmortems and tracked every action item to completion.

Example Health: Senior Software Engineer

Rochester, NY · Jun 2016 – Mar 2020

- Built the deployment pipeline (GitHub Actions, Terraform) that became the company standard.
- Go-to person for production debugging on the claims-processing services.

Sample Payments Co.: Software Engineer

Buffalo, NY · Jul 2011 – Jun 2016

- Wrote and maintained card-authorization services in Java handling about 2M transactions a day.

Education

- **Example State University**: BS, Computer Science, 2011

Certifications

- AWS Certified Solutions Architect, Associate, 2021

Skills

- **Cloud and infrastructure:** AWS · Kubernetes · Terraform · Docker
- **Observability and incident management:** Datadog · Grafana · PagerDuty
- **Languages:** Go · Python · Java · Bash
